TECHNOLOGIES

Bruder Ocular Surface Analyzer™

Comprehensive Dry Eye Assessment

BOSA provides an objective view of ocular surface health with precise test results, creating a clear visual journey for patients.

Comprehensive Solution

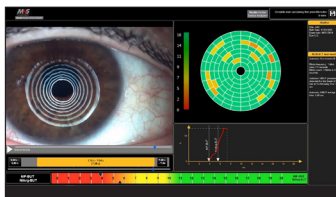

BOSA provides an objective, comprehensive view of ocular surface health, offering precise test results that simplify the process of dry eye diagnosis. With a visual journey that compares patient results to healthy baselines, BOSA helps patients better understand their condition and the recommended treatments, ensuring they are engaged and committed to their care.

For practices—whether new or those looking to improve efficiency—BOSA enhances diagnostic confidence, streamlines treatment plans, and fosters meaningful communication between doctor and patient. By clearly identifying signs of ocular surface disease (OSD), BOSA empowers doctors to offer the most effective treatment advice, improving patient outcomes and satisfaction while optimizing practice efficiency.

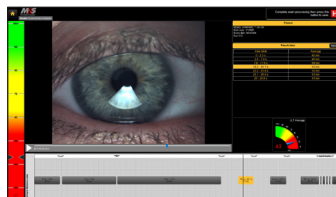

Incorporating BOSA into your practice can help simplify the complexity of diagnosing and treating dry eye disease.

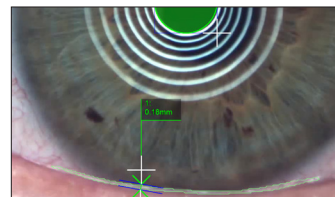

Innovative Diagnostic Technology

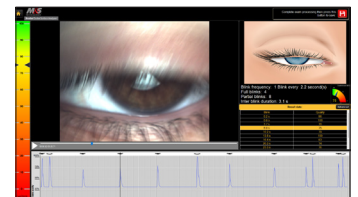

Auto NIBUT Non-Invasive Tear Break Up Time

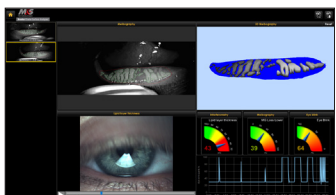

Auto Interferometry Lipid Layer Thickness

Auto Tear Meniscus Height Measurement

Auto Blink Evaluation

Meibography Analysis - 5 Results in 1

Auto Meibography with % Gland Loss

BOSA's advanced diagnostic capabilities include tear film assessment, inflammation evaluation, blink rate and meibomian gland imaging.

Essential dry eye tests can be completed in minutes, ensuring consistent care for every patient—whether it is for a screening, comprehensive, or follow-up exam.

The Leading Platform for Dry Eye Diagnosis and Patient Care

M&S Bruder Ocular Surface Analyzer is a powerful, all-in-one solution for diagnosing and managing dry eye disease (DED).

Save Time and Improve Efficiency

BOSA streamlines dry eye diagnostics, providing essential tests quickly, reducing patient chair time, and freeing up your team to focus on care.

Comprehensive Reports

Help identify disease states and monitor treatment progress with concise and easy-to-read reports.

Patient Education and Compliance

Engage your patients with easy-to-understand reports, available through smartphone scannable QR codes, helping them track their conditions to stay compliant with their treatment plans.

Complete Treatment Protocols

Based on data-driven test results, BOSA helps develop tailored treatment management protocols for your patients.

diagnostic approach
to dry eye with BOSA**

Expert Insights

Feedback from leading doctors

"It's unbelievably fast. It's very easy to put into our workflow. BOSA makes it so much easier to do the prior authorizations."
- Milton Hom, OD

"The answer for both the established Dry Eye practice looking to improve efficiency and the eye care practice looking to start a Dry Eye clinic." - Darrell White, MD

"Gives practitioners immediate ocular surface insights to determine the best treatment approach, with trackable results that support patient understanding and compliance."
- Pam Theriot, OD, FAAO

IDENTIFY

Quickly and easily identify key ocular surface metrics to detect signs of OSD.

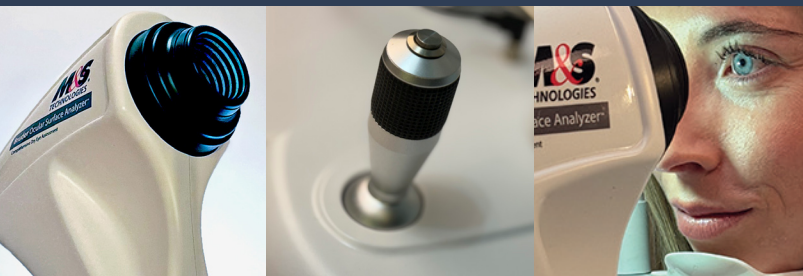

TREAT

Use data to recommend treatment management therapies.

MANAGE

Track progress and adjust treatment plans for ongoing ocular surface health.

Ask about our on site installation and training, technical support, warranty and treatment bundles.

Financing and support programs also available.

Proactively Identify and Treat Dry Eye in Your Practice

You see patients every day who could benefit from a dry eye assessment—even those who may not yet recognize their symptoms. A comprehensive evaluation allows you to identify issues early and provide effective treatment recommendations.

Early diagnosis simplifies treatment and improves results, enhancing patient satisfaction and long-term loyalty. A well-informed patient is more likely to follow treatment recommendations, leading to better compliance and outcomes.

Take a proactive approach to dry eye care and help patients achieve relief.

Flexible testing solutions for your dry eye needs

Whether you're conducting a quick screening, a full dry eye workup, or a follow-up exam, BOSA adapts to your practice's needs.

Perform standardized tests for each patient and build a complete picture of their dry eye condition.

Reports include:

- Complete overview
- Trend/Change analysis
- Treatment recommendations
- Binocular analysis

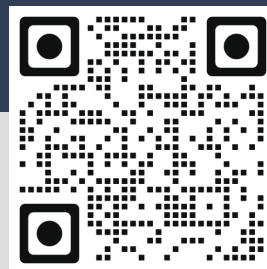

Smartphone patient app is available.

M&S Bruder Ocular Surface Analyzer (BOSA)

is powerful all-in-one solution for diagnosing and managing dry eye disease (DED). It provides a thorough evaluation of the meibomian glands, tear film layers, non-invasive tear breakup time (NIBUT), and blink quality, consolidating test results for more efficient assessments.

Make BOSA™ part of your practice's dry eye solution today and simplify the path to better patient care.
